Hi!

Here below the technical-HTML-code for opening Signal from your website. There are two options given:

- Page 2: hyperlink with (editable) text: “Click here to chat with us via Signal”.
- Page 3: Logo Signal to click

It handles laptops, desktops, tablets, phones and is tested, although not with all type of hardware and browsers. Please let info@Aqqii.com know when you find a problem. Please provide a problemdescription, preferably screenshots, when you know the solution and if you are fine to be contacted to test updates.
It is designed, by the main producers, that browsers cannot check if an application (here relevant: Signal) is installed. The solution does show, after the button is clicked, a message how to install Signal.

See: https://aqqii.com/signal-with-code/ - Note; on this website there is not entered a telephonenumber. So it will just open Signal, but not open the relevant chat with the telephonenumber. With below code it will open the relevant phonenumber, which you shall add to the code.

This has been provided to you by https://aqqii.com, a webstore specialist. 6th January 2026.
You are welcome to contact us for webshop-solutions in writing in any language, via online translators and AI. Spoken communication possible in English, Deutsch, Dutch, Swedish and a bit of French.

We provide you this to reduce the value of Whatsapp (WA), and thereby the power of the Meta and the USA. In comparison with WA, Signal is different: open source, non-profit and does not collect meta-data.

Below code for getting a hyperlink with text “Click here to chat with us via Signal” to click
Replace +123456789 with: {your phonenumber}

```
<div id="signalWidgetContainer">
    <a href="sgnl://signal.me/#p/+123456789" id="signalBtn" class="signal-main-button">
        Click here to chat with us via Signal
    </a>

    <div id="signalFooter" style="display: none;">
        If you don't have Signal, <a href="https://signal.org/download/" target="_blank">download it here</a>.
    </div>
</div>

<script>
    document.getElementById('signalBtn').addEventListener('click', function() {
        // Maakt de downloadbox zichtbaar zodra er geklikt wordt
        // 2026.01.07 Made by Aqqii.com web-shop specialist
        document.getElementById('signalFooter').style.display = 'block';
    });
</script>

<style>
/* Minimale functionele styling voor de structuur */
.signal-main-button {
    display: inline-block;
    cursor: pointer;
}

#signalFooter {
    margin-top: 10px;
}
</style>
```

Below code for using a picutre to click
Replace the following:

- +123456789 with: {your phonenumber}
- http://yourwebsite/wp-content/uploads/yourpicture.png

Here the logo of Signal with some tekst on the right:

```
<div id="signalWidgetContainer">
   <a href="sgnl://signal.me/#p/+123456789" id="signalBtn" class="signal-main-button">
      <img src="http://yourwebsite/wp-content/uploads/yourpicture.png" alt="Chat via Signal"
style="border: none; width: 100px; height: auto;">
   </a>

   <div id="signalFooter" style="display: none;">
      Als je Signal niet hebt, <a href="https://signal.org/download/" target="_blank">download het
hier</a>.
   </div>
</div>

<script>
   document.getElementById('signalBtn').addEventListener('click', function(event) {
      // Voorkom de standaardactie van de link (navigatie)
      event.preventDefault();

      // Probeer de Signal-link te openen
      window.location.href = this.href;

      // Toon de downloadbox als de Signal-link niet werkt (bijv. als Signal niet geïnstalleerd is)
      // 2026.01.07 Made by Aqqii.com web-shop specialist
      setTimeout(function() {
         document.getElementById('signalFooter').style.display = 'block';
      }, 100);
   });
</script>

<style>
/* Minimale functionele styling voor de structuur */
.signal-main-button {
   display: inline-block;
   cursor: pointer;
}
```

```
#signalFooter {
    margin-top: 10px;
}
</style>
```
